

Name: _____

Date: _____

DIRECTIONS

This assessment covers lessons 4.04.01–4.04.03.

Show your work in the box. Write your final answer on the line.

Read every problem carefully. Some problems have more than one part — answer ALL parts.

Take your time. Check your work before you turn in.

1 Pattern stacks

Fill in each stack.

(a) $25 \times 4 = \underline{\quad}$, $250 \times 4 = \underline{\quad}$, $2,500 \times 4 = \underline{\quad}$

(b) $8 \times 6 = \underline{\quad}$, $80 \times 6 = \underline{\quad}$, $800 \times 6 = \underline{\quad}$

COMPUTE BASE FACT, THEN SHIFT

(a) $\underline{\quad} \underline{\quad} \underline{\quad}$ (b) $\underline{\quad} \underline{\quad} \underline{\quad}$

2 Decompose by place value

Break the first factor into tens and ones. Multiply each. Add.

(a) $24 \times 5 = \underline{\quad}$ (b) $36 \times 4 = \underline{\quad}$ (c) $48 \times 6 = \underline{\quad}$

SHOW BOTH PARTIAL PRODUCTS

(a) $\underline{\quad}$ (b) $\underline{\quad}$ (c) $\underline{\quad}$

3 Compensation

Bump to the friendly number. Multiply. Take back the bump.

(a) 99×7 (b) 5×399 (c) $6 \times 4,999$

SHOW THE BUMP AND THE TAKE-BACK

(a) ____ (b) ____ (c) ____

4 Estimate two ways

For $5,172 \times 4$:

- (a) Round to the nearest THOUSAND, then multiply.
(b) Round to the nearest HUNDRED, then multiply.
(c) Find the exact product. (d) Which estimate was closer?

SHOW BOTH ESTIMATES AND THE EXACT

(a) ____ (b) ____ (c) ____ (d) ____

5 4-digit × 1-digit fluency

Find each product using the standard algorithm.

(a) $2,438 \times 3$ (b) $4,206 \times 6$ (c) $3,825 \times 7$

STACK AND MULTIPLY

(a) ____ (b) ____ (c) ____

6 5-digit × 1-digit fluency

Find each product.

(a) $23,475 \times 3$ (b) $41,629 \times 5$ (c) $67,308 \times 4$

STACK AND MULTIPLY

(a) ____ (b) ____ (c) ____

7 MODEL — area model

Draw an area model for $1,243 \times 4$. Split 1,243 into $1,000 + 200 + 40 + 3$. Show all four partial products and the total.

DRAW THE 4-COLUMN MODEL

Total: ____

8 EXPLAIN — pick your tool

For $5 \times 4,999$, would you choose compensation, the standard algorithm, or place-value decomposition? Pick one. Explain why it's the fastest path here.

WRITE YOUR EXPLANATION

My choice: ____ Reason: _____
