

Name: _____

Date: _____

DIRECTIONS

This Independent Practice is for Lesson 4.03.04.

Show your work in the box. Write your final answer on the line.

Read each problem carefully. Use a model or picture if it helps.

If you get stuck, re-read the question and look at any example you already worked through in the lesson.

1 Prime or composite?

A PRIME number has exactly 2 factors (1 and itself). A COMPOSITE number has more than 2 factors.

Label each P or C. Show one factor pair if composite.

(a) 11 (b) 15 (c) 17 (d) 21 (e) 23 (f) 25

TEST EACH WITH DIVISION (2, 3, 5, 7...)

(a)___ (b)___ (c)___ (d)___ (e)___ (f)___

2 All the factors

List ALL the factors of each. Then say prime or composite.

(a) 13 (b) 28 (c) 29 (d) 33

LIST FACTORS; COUNT THEM

(a) factors:___ -> P/C (b) ___ -> P/C (c) ___ -> P/C (d) ___ -> P/C

3 Hunt for primes

From this list, circle every PRIME number:

31, 33, 35, 37, 39, 41, 43, 45, 47, 49

Show how you tested at least one of the harder ones (like 49).

TEST DIVISION BY 2, 3, 5, 7

Primes: ____

4 The 1 problem

Felix says: "1 is prime because it only has one factor." Is Felix correct?

Explain why 1 is NEITHER prime NOR composite. Use the definitions.

WRITE YOUR EXPLANATION

Felix is ____ because:

5 Word problem - Cora's row puzzle

Cora has 23 chairs to arrange in equal rows (more than 1 row, more than 1 chair per row).

(a) Is 23 prime or composite?

(b) Can she make equal rows of more than 1? Why or why not?

(c) What if she had 24 chairs - list every way she could arrange them in equal rows.

CHECK 23, THEN 24

(a) ____ (b) ____ (c) ____
