

Name: _____

Date: _____

DIRECTIONS

This Independent Practice is for Lesson 4.04.03.

Show your work in the box. Write your final answer on the line.

Read each problem carefully. Use a model or picture if it helps.

If you get stuck, re-read the question and look at any example you already worked through in the lesson.

1 Two estimates and exact

For $52,891 \times 4$:

- (a) Round to the nearest TEN-THOUSAND, then multiply.
- (b) Round to the nearest THOUSAND, then multiply.
- (c) Find the exact product.
- (d) Which estimate was closer?

SHOW BOTH ESTIMATES AND THE EXACT

(a) ____ (b) ____ (c) ____ (d) ____

2 5-digit $\times$ 1-digit fluency

Find each product using the standard algorithm.

- (a) $23,475 \times 3$ (b) $41,629 \times 5$ (c) $67,308 \times 4$ (d) $19,256 \times 8$

STACK AND MULTIPLY EACH

(a) ____ (b) ____ (c) ____ (d) ____

3 Above or below the estimate?

For each, find the estimate. Then predict whether the exact product is ABOVE or BELOW the estimate. Then check.

(a) $9,183 \times 3$ (b) $7,624 \times 6$ (c) $38,275 \times 4$

ESTIMATE, PREDICT, THEN VERIFY

(a) ____ (b) ____ (c) ____

4 Word problem — Cora's stadium

Cora's stadium fills with 28,650 fans for each of the 7 home games.

(a) Estimate the total attendance by rounding to the nearest ten-thousand.

(b) Find the exact total.

ESTIMATE FIRST, THEN EXACT

(a) $\approx$ ____ (b) Exact: ____

5 Critical thinking — sharpen the estimate

For $47,318 \times 6$, Hazel rounded to 50,000 and got 300,000. Atlas rounded to 47,000 and got 282,000.

(a) Find the exact product. (b) Whose estimate was closer? (c) Why?

COMPUTE EXACT, COMPARE TO BOTH

(a) ____ (b) ____ (c) ____
