

Name: _____

Date: _____

DIRECTIONS

This Independent Practice is for Lesson 4.04.04.

Show your work in the box. Write your final answer on the line.

Read each problem carefully. Use a model or picture if it helps.

If you get stuck, re-read the question and look at any example you already worked through in the lesson.

1 Pair patterns

Fill in each pair. Use the basic fact, then shift one place.

(a) $87 \times 5 = \underline{\quad}$, $87 \times 50 = \underline{\quad}$

(b) $64 \times 3 = \underline{\quad}$, $64 \times 30 = \underline{\quad}$

(c) $145 \times 4 = \underline{\quad}$, $145 \times 40 = \underline{\quad}$

(d) $9 \times 7 = \underline{\quad}$, $90 \times 70 = \underline{\quad}$

COMPUTE BASE FACT, THEN SHIFT

(a) ____ (b) ____ (c) ____ (d) ____

2 Multiply by a multiple of 10

Find each product. Think: basic fact $\times 10$.

(a) 28×30 (b) 42×60 (c) 156×40 (d) 230×50

BASIC FACT FIRST, THEN $\times 10$

(a) ____ (b) ____ (c) ____ (d) ____

3 Two factors with zeros

Find each product.

(a) 40×70 (b) 80×50 (c) 60×90 (d) 30×200 BASIC FACT $\times$ ZEROS

(a) ____ (b) ____ (c) ____ (d) ____

4 Word problem — Felix's truck tires

A delivery company orders 40 sets of truck tires. Each set costs \$145.

Find the total cost using the $\times 10$ pattern. Show your work.145 $\times$ 4, THEN $\times 10$

Total: \$ ____

5 Critical thinking — count the zeros

Cora wrote: " $60 \times 70 = 420$." Her estimate said it should be near 4,200.

(a) Was Cora close to her estimate? (b) Find the correct product.

(c) Explain the zero-counting rule for two multiples of 10.

COUNT BOTH ZEROS, NOT JUST ONE

(a) ____ (b) ____ (c) ____
