

Name: _____

Date: _____

DIRECTIONS

This Independent Practice is for Lesson 4.04.05.

Show your work in the box. Write your final answer on the line.

Read each problem carefully. Use a model or picture if it helps.

If you get stuck, re-read the question and look at any example you already worked through in the lesson.

1 Set up partial products

Split the second factor into its tens and ones. Multiply each piece. Add.

(a) $34 \times 28 = (34 \times 20) + (34 \times 8) = \underline{\quad} + \underline{\quad} = \underline{\quad}$

(b) $56 \times 45 = (56 \times \underline{\quad}) + (56 \times \underline{\quad}) = \underline{\quad} + \underline{\quad} = \underline{\quad}$

(c) $127 \times 36 = (127 \times \underline{\quad}) + (127 \times \underline{\quad}) = \underline{\quad} + \underline{\quad} = \underline{\quad}$

SHOW BOTH PARTIAL PRODUCTS

(a) _____ (b) _____ (c) _____

2 Partial products — bigger factors

Use the partial-product method for each.

(a) 245×32 (b) 318×24 (c) 506×47 (d) 638×48

SPLIT, MULTIPLY, ADD

(a) _____ (b) _____ (c) _____ (d) _____

3 Estimate first

For each, round both factors to estimate. Then find the exact product.

(a) 48×53 (b) 187×26 (c) 425×38

ESTIMATE THEN COMPUTE EXACT

(a) ____ (b) ____ (c) ____

4 Word problem — Hazel's seating

The school auditorium has 28 rows. Each row seats 36 people.

(a) Estimate the total seats. (b) Find the exact total using partial products.

SPLIT 36 INTO $30 + 6$

(a) $\approx$ ____ (b) Exact: ____

5 Critical thinking — missing partial

Atlas computed 638×48 like this: $638 \times 40 = 25,520$ $638 \times 8 = 5,104$ Total = ____

(a) Add the two partial products to find the total.

(b) Why did Atlas multiply by 40 first, not by 4?

ADD THE PARTIAL PRODUCTS

(a) ____ (b) Reason:
