Date: \_\_\_\_\_

**DIRECTIONS**

This Independent Practice is for Lesson 4.08.03.

Show your work in the box. Write your final answer on the line.

Read each problem carefully. Use a model or picture if it helps.

If you get stuck, re-read the question and look at any example you already worked through in the lesson.

**1 Multiply — express as a mixed number in simplest form**

Watch for answers that are whole numbers, like  $4 \times \frac{3}{4} = 3$ .

(a)  $4 \times \frac{3}{4}$  (b)  $4 \times \frac{7}{10}$  (c)  $6 \times \frac{5}{9}$  (d)  $3 \times \frac{2}{9}$

MULTIPLY + SIMPLIFY + CONVERT

(a) \_\_\_\_ (b) \_\_\_\_ (c) \_\_\_\_ (d) \_\_\_\_

**2 Bigger products — express as a mixed number in simplest form**

Each answer needs converting AND simplifying.

(a)  $8 \times \frac{3}{4}$  (b)  $15 \times \frac{2}{5}$  (c)  $3 \times \frac{5}{6}$

MULTIPLY + SIMPLIFY + CONVERT

(a) \_\_\_\_ (b) \_\_\_\_ (c) \_\_\_\_

**3 Mixed practice — express as a mixed number in simplest form**

Some convert to whole numbers; some are mixed.

(a)  $8 \times \frac{3}{10}$  (b)  $10 \times \frac{3}{8}$  (c)  $15 \times \frac{4}{9}$

MULTIPLY + SIMPLIFY + CONVERT

(a) \_\_\_\_ (b) \_\_\_\_ (c) \_\_\_\_

**4 Word problem — chocolate bars**

Each chocolate bar weighs  $\frac{3}{4}$  of an ounce. A pack contains 8 bars.

How many ounces does the pack weigh in total? Express as a mixed number in simplest form.

$8 \times \frac{3}{4}$ ; SIMPLIFY

Total: \_\_\_\_ oz

**5 Critical thinking — same product two ways**

Show that  $6 \times \frac{5}{9} = 5 \times \frac{6}{9}$  by doing both multiplications.

(a) Find each product and express each in simplest form.

(b) Explain why both products are equal.

TWO WAYS, COMPARE

(a) \_\_\_\_ (b) \_\_\_\_
